# Another Contest 9 Problem 5 - Satellite

**Time limit:** 1.0s **Memory limit:** 256M

From atop a satellite, Nick has drawn N lines on the surface of a plane, no three of which intersect at a common point. He counts many triangles, but how many of them contain no triangles with a strictly smaller area?

#### **Constraints**

```
1 \le N \le 500
```

$$|x_i|, |y_i| \leq 2 \cdot 10^3$$

All lines are pairwise distinct.

No three lines intersect at a common point.

#### **Input Specification**

The first line contains a single positive integer, N.

The next N lines contain four space-separated integers,  $x_1$ ,  $y_1$ ,  $x_2$ ,  $y_2$ , indicating a line going through distinct points  $(x_1, y_1)$  and  $(x_2, y_2)$ .

### **Output Specification**

Output the number of such triangles.

## **Sample Input**

```
4
0 0 0 10
0 0 10 0
0 5 5 5
0 10 10 0
```

#### **Sample Output**

1
