# Scroll

**Time limit:** 2.0s     **Memory limit:** 64M

While wandering through a forest, **FatalEagle** comes across a «Scroll». He's not too sure about the meaning of the contents of the «Scroll», just like he has his doubts about the content of this problem.

## Input Specification

A single integer, $N$ $(0 \leq N \leq 100)$. Just kidding, no input.

## Output Specification

Who knows? Does it matter to you that much?

## Sample Input

It might exist, but it probably doesn't.

## Sample Output

Can sample output exist without sample input? If a tree falls in a forest and no one is around to hear it, does it make a sound? Is the previous question even relevant?
